Profile

Android Developer with 2+ years of experience building scalable and high-performance mobile applications using Kotlin, Java, and the Android SDK. Experienced in implementing modern Android architectures including MVVM and Clean Architecture while developing responsive user interfaces with Jetpack components and Material Design. Skilled in integrating RESTful APIs, managing local data using Room and SQLite, and implementing background processing with Kotlin Coroutines and WorkManager. Proficient in debugging, performance optimization, and delivering stable mobile releases through structured versioning, testing, and Google Play Store deployment practices.

Technical Skills

Programming Languages & Frameworks: Kotlin, Java, Android SDK, XML, Kotlin Coroutines, Jetpack Libraries, Android App Architecture, Mobile Application Development

Architecture & Application Design: MVVM, MVP, Clean Architecture, Repository Pattern, Dependency Injection (Hilt, Dagger), Modular Architecture, SOLID Principles, Scalable Mobile Architecture

Android Components & UI Development: Activity & Fragment Lifecycle, ViewModel, LiveData, Navigation Component, Jetpack Compose, Material Design, ConstraintLayout, RecyclerView, Custom UI Components, Animation APIs

Networking & Data Managemen: RESTful APIs, Retrofit, OkHttp, JSON Parsing, API Integration, Web Services, Data Serialization, Data Synchronization, Offline Data Handling

Local Storage & Cloud Integration: SQLite, Room Database, DataStore, SharedPreferences, Firebase Realtime Database, Firebase Firestore, Firebase Cloud Messaging (FCM), Secure Token Storage

Development Tools, Testing & Deployment: Android Studio, Git, GitHub, Bitbucket, Gradle, JUnit, Mockito, CI/CD (GitHub Actions, JNK) Debugging, Performance Optimization, Google Play Store Deployment, App Signing, Firebase Analytics, Crashlytics, App Monitoring

Professional Experiences

Android Developer, pagerduty — Jan 2025 – Present | Remote, USA

- Engineered incident management features for the PagerDuty Android application using Kotlin, Clean Architecture, and Hilt dependency injection, enabling DevOps engineers to efficiently acknowledge alerts and manage on-call workflows.
- Implemented structured background job processing using WorkManager and DataStore, enabling reliable synchronization of alert data and preferences while maintaining stable application behavior during intermittent network connectivity scenarios.
- Improved incident timeline rendering efficiency by 34% by optimizing Kotlin Coroutine concurrency models and paging mechanisms, enabling faster retrieval and display of operational alert history across production environments.
- Designed modern mobile interfaces using Jetpack Compose and animation APIs, allowing engineers to visualize service health signals and operational alerts through interactive dashboards within the mobile monitoring platform.
- Developed REST-based mobile service integrations using OkHttp networking pipelines and JSON serialization, enabling secure communication between the Android client and PagerDuty's distributed incident management services.
- Reduced application crash occurrences by 29% through proactive debugging practices using Android Studio profiler, Gradle build optimization, and structured error monitoring pipelines across production mobile releases.
- Strengthened secure mobile authentication by integrating encrypted token management and identity validation workflows, increasing successful enterprise mobile login reliability by 22% across active PagerDuty engineering users.

Android Developer, *HCL Tech* — May 2022 – Jul 2023 | Indore, India

- Developed scalable enterprise Android applications using Java, Android SDK, and MVVM architecture, enabling business teams to streamline workflow approvals, operational reporting, and internal service management processes.
- Built dynamic user interfaces using ConstraintLayout, RecyclerView, and custom UI components, enabling enterprise users to efficiently access dashboards, operational data records, and workflow management tools.
- Integrated enterprise backend systems through Retrofit-based RESTful API services, enabling secure data exchange and consistent synchronization of transactional records between Android applications and enterprise service platforms.
- Implemented mobile data persistence using SQLite and Room Database layers, enabling offline operational capabilities for distributed employees working in field environments with limited network availability.
- Established structured application navigation flows using Activity lifecycle management, Fragment architecture, and Navigation Components, improving usability consistency across enterprise Android application modules.
- Improved application startup and transaction processing performance by 31% by optimizing API request handling, background processing tasks, and structured data caching strategies across core Android modules.
- Managed mobile application releases through Google Play Store deployment pipelines, implementing versioning, app signing, and monitoring through Firebase Analytics and Crashlytics, reducing production defects by 25% after major releases.

Education

Master of Science, *Drexel University* — Aug 2023 – Mar 2025 | Pennsylvania, USA
Computer Science

Bachelor of Technology, *S.D Bansal College of Technology* — Aug 2019 – Jul 2023 | Indore, India
Computer Science
